

Name: Yuehan Dai

CS login: ydai05

GitHub Page:

<https://yuehandai.github.io/Comp20-Web/Assignment1/page>

Cpanel hosting:

<http://comp20.great-site.net/assignment1/page.html>

Name one advantage to using github and one advantage to using the cpanel hosting.

Advantage of Github Page:

Setting up is much easier than the Cpanel hosting, which requires only several minutes to set up the new page. Further, Github Page does not cost.

Advantage of Cpanel hosting:

Cpanel hosting can upload and download the file in the server and the local folder automatically with FTP setting, which means the changes in our local files can be uploaded directly into the server and the web pages can update easily.

Which of the types of hosting do you prefer and why?

I prefer Cpanel hosting. This is because Cpanel hosting allows the changes to be set up automatically through FTP, which allows me to see the changes in the webpage directly after refreshing.

What was the most satisfying part of this assignment?

Personally speaking, I am really satisfied of trying different layouts of the provided contents(like text and image), which I make the text into a diagram rather than I paragraph because I think the table is more formatted and suitable with the contexts of this assignment. Also, the time when I refreshed the page is really satisfying when I see my first web page.
